

MEDAGAM V S MANJUNADHA REDDY

B.Tech in Computer Science and Engineering

✉ saimanjunadhareddy1309@gmail.com ☎ 9121407582

📍 4-1139/3 Gandhi Nagar, Podili Road, Darsi

SUMMARY

Technically driven Software Engineer and B.Tech IT graduate specializing in end-to-end software development, scalable backend architectures, and machine learning pipelines. Experienced in designing RESTful APIs, optimizing relational databases, and deploying AI models to edge and cloud environments. Adept at leveraging Python, JavaScript, and SQL to build data-driven applications, automate workflows, and extract actionable insights from complex datasets for SDE and Data Engineering roles.

CERTIFICATIONS

Cloud Infrastructure Data Science Professional Oracle	Cloud Infrastructure DevOps Professional Oracle	Certified System Administrator ServiceNow
Certified Application Developer ServiceNow		

SKILLS

Programming Languages Python, JavaScript, SQL, PHP, BASH	Backend & Cloud Infrastructure Node.js, Express.js, REST APIs, Firebase
Frontend Technologies HTML, CSS, React.js, Flutter	Data Engineering & AI Machine Learning, Data Pipelines, NLP, Pandas, NumPy, Power BI, Tableau
Tools & Databases Git/GitHub, MySQL, MongoDB, TensorFlow Lite (TFLite), ServiceNow	

EXPERIENCE

Software Engineer Intern Developer, <i>TANGEDCO (TamilNadu Generation And Distribution Corporation Limited)</i>	06/2024 – 07/2024 Chennai
- Built an Employee Email Database Management System deployed for the Tamil Nadu government using a PHP backend. - Implemented encrypted access controls and role-based authentication to ensure secure data management. - Developed a user-friendly interface for efficient employee data entry and retrieval operations.	

PROJECTS

XAI Based Mobile Health Screening System
- Developed an Explainable AI (XAI) mobile platform designed to support early risk assessment for Diabetes, Stroke, Pneumonia, and Skin Lesion conditions. - Engineered the technical pipeline by building models in Python using TensorFlow, and deployed them via Flutter and TensorFlow Lite for on-device inference and reduced latency.

- Integrated Firebase for secure authentication and cloud synchronization, creating role-based workflows for both patients and doctors.
- Implemented feature-level explanations for tabular clinical modules and visual interpretability support for image-based modules to ensure transparent model decisions.

Multi-Agent Research & Report Generator

- Built a multi-agent AI system using LLMs to automate research, analysis, and report generation.
- Designed Planner, Researcher, Analyst, and Writer agents with tool integration.
- Integrated external APIs for real-time data retrieval.
- Implemented agent orchestration pipeline improving task decomposition and reasoning.

IoT-Based Automated Energy Conservation System

- Engineered IoT system using Jetson Nano and YOLOv5 for occupancy-based automation, reducing energy costs.
- Automated appliance control with smart timeout logic using computer vision and Python.
- Developed REST APIs for remote monitoring and real-time system control.

EDUCATION

Class XII - CBSE MPC, VELAMMAL INTERNATIONAL SCHOOL PONNERI Percentage - 80.2%	2022
Class X - CBSE, DIVINE CHILD SCHOOL MEHSANA Percentage - 81.4%	2020
B.Tech Computer Science and Engineering - Information Technology, SRM IST-Kattankulathur CGPA-8.78/10	2022 – 2026

PATENTS

DUAL INTERFACE XAI BASED SYSTEM FOR MULTI CHRONIC DISEASE RISK PREDICTION AND CLINICAL VALIDATION

Filed a patent application for a Dual Interface Explainable AI-based system designed to predict and assess risks of multiple chronic diseases using patient clinical data, AI models, and clinician validation. The system focuses on transparent healthcare decision support through interpretable model outputs and patient-friendly risk explanations.
