EDUCATION

SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering; CGPA: 8.78/10

Kattankulathur, TN

2022 – 2026

The Velammal International School

Class XII - CBSE; Percentage: 80.2%

Ponneri, TN

2022

Divine Child School

Class X - CBSE; Percentage: 81.4%

Mehsana, GJ

2020

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, C++

Backend & Databases: Node.js, NestJS, Express.js, REST APIs, MongoDB, MySQL, PostgreSQL

AI & Data Engineering: Machine Learning, Data Pipelines, Feature Engineering, NLP

Developer Tools: Git, GitHub, Docker, Firebase, ServiceNow

EXPERIENCE

Software Engineer Intern

TANGEDCO - Tamil Nadu Generation and Distribution Corporation Limited

June 2024 – July 2024

Chennai, TN

- Built an Employee Email Database Management System deployed for the Tamil Nadu government using a PHP backend
- Implemented encrypted access controls and role-based authentication to ensure secure employee data management
- Developed a user-friendly interface for efficient employee data entry and retrieval operations

PROJECTS

FinCore Banking Platform | *Node.js, NestJS, PostgreSQL, Docker, Jest, Supertest*

- Built a modular core banking API with JWT authentication, accounts, transfers, statements, and reversals
- Implemented an immutable double-entry ledger with atomic transactions, idempotency, audit logs, and row locking
- Achieved 98.61% line coverage using Jest, Supertest, PostgreSQL integration tests, Docker, and GitHub Actions

XAI-Based Mobile Health Screening System | *Python, TensorFlow, Flutter, TFLite, Firebase*

- Developed an Explainable AI mobile platform for early risk assessment of diabetes, stroke, pneumonia, and skin lesion conditions
- Built machine learning models using Python and TensorFlow and deployed them through Flutter and TFLite for on-device inference
- Integrated Firebase authentication and cloud synchronization with role-based workflows for patients and doctors

IoT-Based Automated Energy Conservation System | *Jetson Nano, YOLOv5, Python, REST APIs*

- Engineered an occupancy-based appliance automation system using Jetson Nano, YOLOv5, and Python
- Automated appliance control using real-time occupancy detection and configurable timeout logic
- Developed REST APIs for remote monitoring and real-time system control

PATENTS

XAI-Based System for Multi-Chronic Disease Risk Prediction and Clinical Validation

- Filed a patent application for an explainable AI system that predicts multiple chronic-disease risks using clinical data, AI models, and clinician validation
- Designed interpretable model outputs and patient-friendly explanations to support transparent healthcare decision-making

CERTIFICATIONS

Oracle: OCI Data Science Professional, OCI DevOps Professional, Agentic AI Certified Foundations Associate

ServiceNow: Certified System Administrator, Certified Application Developer

NISM: SEBI Investor Awareness Certification
