## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>XAI-Based Mobile Health Screening System</b> <ul style="list-style-type: none"><li>Developed an Explainable AI (XAI) mobile platform for early risk assessment of diabetes, stroke, pneumonia, and skin lesion conditions.</li><li>Built machine-learning models using Python and TensorFlow and deployed them through Flutter and TensorFlow Lite for on-device inference.</li><li>Integrated Firebase authentication and cloud synchronization with role-based workflows for patients and doctors.</li></ul> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**FinCore Banking Platform**

- Built a modular core banking API supporting JWT authentication, account management, administrator-controlled deposits, atomic transfers, statements and transaction reversals.
- Implemented an immutable double-entry ledger with balanced debit and credit entries, atomic transactions, idempotent payment processing, audit logs, outbox events and PostgreSQL row locking.
- Achieved 95.28% line coverage using Jest and Supertest, supported by PostgreSQL integration tests, Docker-based test infrastructure and GitHub Actions CI.

**IoT-Based Automated Energy Conservation System**

- Engineered an occupancy-based appliance automation system using Jetson Nano, YOLOv5 and Python.
- Automated appliance control using real-time occupancy detection and configurable timeout logic.
- Developed REST APIs for remote monitoring and real-time system control.

**PATENTS**

---

**Dual-Interface XAI-Based System for Multi-Chronic Disease Risk Prediction and Clinical Validation**

- Filed a patent application for an explainable AI system that predicts multiple chronic-disease risks using clinical data, AI models and clinician validation.
- Designed interpretable model outputs and patient-friendly explanations to support transparent healthcare decision-making.
